Really achieved? High to scary world's tallest building

2016-02-26 06:34:16 4656 times Read 0 times Recommended source: [Wei Feng network 7](#) reviews

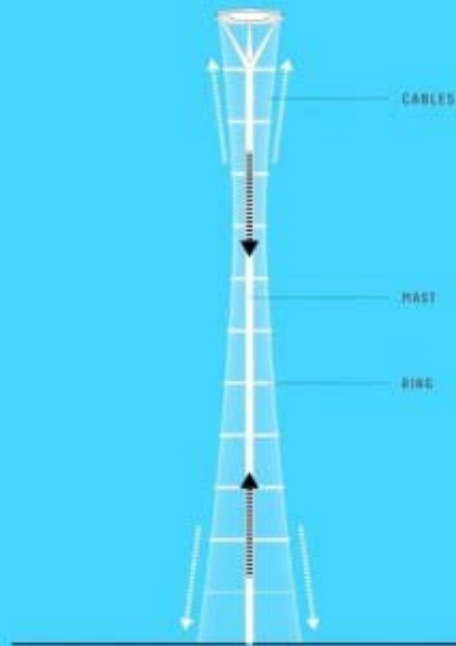

If the Italian architect Carlo Ratti recently announced a new viewing tower can be completed successfully, it will be the world's highest observation tower, will also be the world's tallest building, but also much higher than the second. Viewing tower called The Mile, the tower its name, up to a mile is 1609 meters. Currently the tallest building is the Burj Khalifa in Dubai, 830 meters high. Even in 2018 is nearing completion 沙特吉达塔, but also 1000 meters only.

## STRUCTURE CONCEPT

The proposed solution employs a structural shaft in compression, supporting the Sky Deck above and secured through pre-stressed cables held in tension.

## SKY PATH CONCEPT

The ultimate draw of the view from the top is celebrated by creating and sustaining a feeling of suspense as visitors ascend the tower towards the Sky Deck. Once at the top, views of the sky are carefully curated, building up to the "on the edge" moment.

Because of this, The Mile construction plan was much contested, after all, this height is too exaggerated, to complete the technical difficulty is great. In this regard, Carlo Ratti replied, The Mile is a real plan, a customer in support. According to conception, The Mile is a vertical park open to the public. Visitors will take a capsule-shaped elevator to the top of the rotation about the axis, there is a

table, as well as viewing the hotel.I do not know when this grand ambition can be achieved, even if its future can come true, we have to wait a long time yet.[Editor: ugmbbc]
